

“Green” Technology Within the Plan

- Energy efficiencies are designed within the new plan providing for:
 - Heat recovery units
 - Natural gas fired condensing boilers (dollar for dollar a more efficient fuel source)
 - Variable frequency drives saving energy
 - Displacement ventilation
 - Radiant heat floors – increased efficiency
 - Lighting and power controls
 - Continuous daylight harvesting
 - Window and wall replacement (better insulation and elimination of water infiltration)
 - Occupancy room sensors for lighting control and demand-based ventilation
